

Data Anonymization for

Anonymizer Powered by: SYSTRAN

- ✓ **Automatically anonymize data** contained within a collection of documents
- ✓ Bulk **encryption** using the Mass Action feature in Relativity
- ✓ **Customize** Anonymization to hide unique identifying details
- ✓ Support your **billing process** by accurately reflecting workload completed
- ✓ **Protect** your Anonymization Process with **User-Group permissions**

The eDiscovery anonymization tool, conceptualized by the international law firm Reed Smith LLP, applies rigorous anonymization techniques to the full text and metadata of electronic documents within the kCura Relativity e-Discovery platform.

Anonymization can be used to mask identifying details in a documents such as names, addresses, identification numbers, places, amounts and so forth when reading the anonymized documents.

However, anonymized documents retain sufficient information for most relevancy reviews. Users also have the ability to "pseudonymize" selected names replacing pre-identified names with chosen pseudonyms on a mass basis to provide another option for privacy protection.

Ensure information security: Your sensitive data stays secure. **Anonymization processes** never leave your network, preventing data leakage and ensuring compliance..

Reduce operations costs: The use of automated **anonymization** reduces the need for localization or human translation costs.

Anonymize large volumes: SYSTRAN's scalable architecture delivers fast **processes**, granting you additional time to review, analyze and produce a winning legal strategy.

Equip your eDiscovery: Leverage the full range of linguistic functionalities like Translation, Named Entity Recognition and Domain Detection, found in the SYSTRAN Enterprise Server 8.

SYSTRAN offers 45 languages in more than 130 language pairs; other pairs possible upon request.
